

25X1

b. [] JJH informed Stoertz that it was his intention to meet with [] today to discuss the [] matter. Stoertz was somewhat apologetic for having sent the Field Reassignment Questionnaire to NPIC for consideration. Stoertz said that he had not known about the FRQ at the time he wrote the letter to []

c. OSA Egyptian Contingency Planning

JJH told Stoertz of the request from OSA for SAM locations in Egypt. Stoertz replied that we should be on the alert for a requirement that IAS had received from OSR (backed by DDCI) for an OB readout of Egyptian forces [] (JJH asked to see whether or not we have received such a requirement - AEM asked [] to look into this matter.)

d. ChiCom Submarine Construction - The CIB Black Book item of today which stated that the ChiComs were "probably" constructing submarines in the South China area was discussed. Both JJH and Stoertz took the view that the OSR people are responsible for CIB Black Book reporting despite the PI viewpoint. Both IAS and NPIC/IEG have thought that this was a "possible" development. (Following the meeting JJH sent a note to HH pointing out that our responsibility is to make sure that they know and understand what the PI point of view is - OSR's responsibility is to apply that judgment.)

e. Damansky Island - IAS/IEG differences of opinion on the timing of the construction of the trenches on Damansky Island, Sino-Soviet Border, was discussed. JJH observed that he thought that the tent camps which had been identified in other areas of the border region were more important. He suggested that a study of the timing of the appearance of these tent camps in relationship to road construction in the area might shed light as to whether or not these were construction troops or combat troops.

f. Production Backlog - JJH told Stoertz of his steps to spread out the workload on the preparation of basic reports. Although IAS is not of immediate concern since they give us their reports in copy ready form, Stoertz volunteered to see what he could do to get theirs in more rapidly.

h. NPIC PIM's and PIR's - Stoertz expressed concern with the tendency in NPIC's PIM's and PIR's to not give precise information as to the date of photography. (JJH plans to watch this.) Stoertz did give high praise to a recent NPIC PIR on the Soviet Missile Test Center Activity which he stated had been a very useful working tool in IAS.
